# 建筑物就像一个游乐场

## Architecture as a game field

Elii

"House of Would", Pedrezuela, Madrid, Spain

“伍德住宅”，佩德雷苏埃拉，马德里，西班牙

此建筑由七个完全相同的对称式木质结构模块组成，这些模块围绕在中央庭院的四周。根据功能需求，每个模块均有不同用途。一系列小桥作为过渡元素，将不同区域和楼层上的私人空间相互连接在一起。

The building is made up of seven identical wooden-structure modules, symmetrically surrounding a central court. Each module is dedicated to a different program, according to its functional needs. A series of small bridges serve as transition elements between the different areas and accommodate the different levels of privacy.

产业化建筑

板的装配  
形式大大缩短  
了工期

*The industrialised building system and the assembly of the structural wooden panels shorten the construction period*

建筑外部包裹一层木质包层，形成可以通风的建筑立面和屋顶。

The project is closed by a wooden envelope, generating a ventilated façade and roof.
